Marks	1.00/1.00
Grade	10.00 out of 10.00 (100%)

Question 1 | Correct Mark 1.00 out of 1.00**Problem Statement**

Given an array of 1s and 0s this has all 1s first followed by all 0s. Aim is to find the number of 0s. Write a program using Divide and Conquer to Count the number of zeroes in the given array.

Input Format

First Line Contains Integer m – Size of array

Next m lines Contains m numbers – Elements of an array

Output Format

First Line Contains Integer – Number of zeroes present in the given array.

Answer: (penalty regime: 0 %)

```

1  #include<stdio.h>
2  int main(){
3      int m,i,low,high,mid;
4      scanf("%d",&m);
5      int a[m];
6      for(i=0;i<m;i++)
7          scanf("%d",&a[i]);
8      low=0;high=m-1;
9      while(low<=high){
10         mid=(low+high)/2;
11         if(a[mid]==0) high=mid-1;
12         else low=mid+1;
13     }
14     printf("%d\n", m-low);
15     return 0;
16 }
17

```

Grade 10.00 out of 10.00 (100%)

Question 1 | Correct Mark 1.00 out of 1.00

Given an array `nums` of size `n`, return *the majority element*.

The majority element is the element that appears more than $\lfloor n / 2 \rfloor$ times. You may assume that the majority element always exists in the array.

Example 1:

Input: `nums = [3,2,3]`

Output: 3

Example 2:

Input: `nums = [2,2,1,1,1,2,2]`

Output: 2

Constraints:

- `n == nums.length`
- `1 <= n <= 5 * 104`
- `-231 <= nums[i] <= 231 - 1`

For example:

Input	Result
3 3 2 3	3
7 2 2 1 1 1 2 2	2

Answer: (penalty regime: 0 %)

```

1  #include <stdio.h>
2  #include <stdlib.h>
3
4  int count(int *a, int x, int l, int r) {
5      int c = 0;
6      for (int i = l; i <= r; i++)
7          if (a[i] == x) c++;
8      return c;
9  }
10
11 int majority(int *a, int l, int r) {
12     if (l == r) return a[l];
13     int m = (l + r) / 2;
14     int left = majority(a, l, m);
15     int right = majority(a, m + 1, r);
16     if (left == right) return left;
17     int leftCount = count(a, left, l, r);
18     int rightCount = count(a, right, l, r);
19     return (leftCount > rightCount) ? left : right;
20 }
21
22 int main() {
23     int n;
24
25     scanf("%d", &n);
26

```

```
27 | int *nums = malloc(n * sizeof(int));
28 | if (!nums) {
29 |     printf("Memory allocation failed.\n");
30 |     return 1;
31 | }
32 |
33 |
34 | for (int i = 0; i < n; i++) {
35 |     scanf("%d", &nums[i]);
36 | }
37 |
38 | int maj = majority(nums, 0, n - 1);
39 | printf("%d\n", maj);
40 |
41 | free(nums);
42 | return 0;
43 | }
```

Question 1 | Correct Mark 1.00 out of 1.00**Problem Statement:**

Given a sorted array and a value x, the floor of x is the largest element in array smaller than or equal to x. Write divide and conquer algorithm to find floor of x.

Input Format

First Line Contains Integer n – Size of array

Next n lines Contains n numbers – Elements of an array

Last Line Contains Integer x – Value for x

Output Format

First Line Contains Integer – Floor value for x

Answer: (penalty regime: 0 %)

```

1  #include<stdio.h>
2  int main(){
3      int n,x;
4      scanf("%d",&n);
5      int a[n];
6      for(int i=0;i<n;i++){
7          scanf("%d",&a[i]);
8      }
9      scanf("%d",&x);
10     int low=0,high=n-1;
11     int floor_val=1;
12     while(low<=high){

Question 1 | Correct Mark 1.00 out of 1.00**Problem Statement:**

Given a sorted array of integers say arr[] and a number x. Write a recursive program using divide and conquer strategy to check if there exist two elements in the array whose sum = x. If there exist such two elements then return the numbers, otherwise print as "No".

Note: Write a Divide and Conquer Solution

Input Format

First Line Contains Integer n – Size of array

Next n lines Contains n numbers – Elements of an array

Last Line Contains Integer x – Sum Value

Output Format

First Line Contains Integer – Element1

Second Line Contains Integer – Element2 (Element 1 and Elements 2 together sums to value "x")

Answer: (penalty regime: 0 %)

```

1  #include<stdio.h>
2  int findpair(int arr[],int left,int right,int x,int *num1,int *num2)
3  {
4      if(left>=right)
5          return 0;
6      if(arr[left]+arr[right]==x)
7      {
8          *num1=arr[left];
9          *num2=arr[right];
10         return 1;
11     }
12     if(arr[left]+arr[right])
13     {

Question 1 | Correct Mark 1.00 out of 1.00

Write a Program to Implement the Quick Sort Algorithm

Input Format:

The first line contains the no of elements in the list-n

The next n lines contain the elements.

Output:

Sorted list of elements

For example:

Input	Result
5 67 34 12 98 78	12 34 67 78 98

Answer:

```

1  #include<stdio.h>
2  void quicksort(int a[],int left,int right)
3  {
4      int i,j,pivot,temp;
5      if(left<right)
6      {
7          pivot=left;
8          i=left;
9          j=right;
10         while(i<j)
11         {
12             while(a[i]<=a[pivot] && i<right)
13                 i++;
14             while(a[j]>a[pivot])
15                 j--;
16             if(i<j)
17             {
18                 temp=a[i];
19                 a[i]=a[j];
20                 a[j]=temp;
21             }
22         }
23         temp=a[pivot];
24         a[pivot]=a[j];
25         a[j]=temp;
26         quicksort(a,left,j-1);
27         quicksort(a,j+1,right);
28     }
29 }
30 int main()
31 {
32     int n;
33     scanf("%d",&n);
34     int a[n];
35     for(int i=0;i<n;i++)
36         scanf("%d",&a[i]);
37     quicksort(a,0,n-1);
38     for(int i=0;i<n;i++)
39         printf("%d ",a[i]);
